User Privileges

By maintaining thorough records of initial plans, assessment plans, supporting evidence and other user interactions, the SkilSure® solution accelerates the guided development of candidates while ensuring that development is in conformance with good practice, and complies with national standards.

SkilSure® S/NVQ has been flexibly designed so that user rights can be customised to suit the S/NVQ framework selected by your organisation. User profiles can be assigned to candidates, assessors, internal and external verifiers and others consistent with program requirements.

Note how each security profile has access to specific functionality that enables the user to, for example, submit assessment plans, record candidate activity, run reports, record meetings, deliver news bulletins, and view candidate information. With SkilSure®, you can do it all!
