

SkilSure® S/NVQ Solution

Reports & Other Features

SkilSure®'s S/NVQ solution has a host of other fully flexible and customisable features to support the needs of your S/NVQ program.

- "Home" displays an informational and navigational process map that provides an at-a-glance view of the S/NVQ scheme. It shows you pop-ups of every user's individual role in the process, highlights your own, and links to the associated functionality in SkilSure® for quick and easy navigation.
- "Qualifications" acts as an informational hub, providing users a library of units and qualifications relevant to the S/NVQ that is being pursued.
- "Reports" allows users to search and report on a database of transactions and to track the progress of candidates. To further streamline your process, a report generator is included for those who wish to build reports tailored to their own criteria.
- "Notice Board" allows those with administrative privileges to post bulletins for other users, keeping them current with important news updates.
- "Meetings" allows users to maintain records of candidate interactions including when the meetings were held, the topics covered, and the outcome of the discussion.
